A detailed photograph of a Loro Maitaca (Pionus maximiliani) perched on a light brown tree branch. The bird is shown in profile, facing left. It has a black head with a white ring around its eye, a dark beak, and a green body with a purple-grey throat. Its wings are green, and its tail features a prominent red patch. The background is a soft, out-of-focus light blue and white.

A giant armadillo (Myrmecophaga tridactyla) is shown in its natural habitat, a grassy field. The animal is dark brown with a distinctive white stripe running down its back and sides. It has a long, curved, and segmented snout, which it is using to dig into the ground near a dark rock. The background is a vast, open landscape with tall, golden-brown grasses under a clear sky.

OSO HORMIGUERO
(*Myrmecophaga tridactyla*)

A photograph of a Tamandua tetradactyla, also known as an Oso Melero, climbing a thick, textured tree branch. The animal has a black body with distinctive reddish-brown patches on its neck, chest, and limbs. It has a long, dark, prehensile tail that is curled around the branch. The background is a soft-focus view of green foliage and other tree branches.
